                                                                                                                                                                                                                                                                                                                                   Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 BB

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention provides cells originating in the human bone more umbilical blood cells which are capable of differentiating into cardiomyocytes. These cells are useful in the treatment of diseases involving heart muscle degeneration, such as myocardial infarction, the study of cardiomyocyte differentiation. The present sequence is oligonucleotide described in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 3396 BP;

Ś 日

The present invention describes cells originating in bone marrow or umbilical blood cells which are capable of differentiating into cardiomyocytes. Also described are: (1) cardiomyocytes produced by th differentiation of the cells; (2) a method for carrying out the differentiation into cardiomyocytes, regulated by a promotional and/o inhibitory factor; (3) a method for the differentiation of the cells cell types other than cardiomyocytes; (4) drug compositions promoting

and/or by the

into

the

The cells are used in the treatment of diseases involving heart muscle degeneration, such as myocardial infarction and in the study of cardiomyocyte differentiation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to the isolation of compounds that bind and inhibit the activity of HIV-1 reverse transcriptase (RT) or human telomerase reverse transcriptase (RT). The method involves determining these compounds using a HIV-1 RT/hTERT chimeric construct containing the catalytic sites of each enzyme. The nucleic acid is useful for treating or preventing unregulated cellular growth, including cancer cell and tumor growth. It is also useful in gene therapy. Compounds that inhibit telomerase activity can be used to treat cancer. The vectors of the invention can be used to amplify DNA or RNA encoding HIV-RT/hTERT and/or express DNA which encodes HIV-RT/hTERT. This sequence corresponds to a coding sequence for the human TERT protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 3396 BP;
